

TRANSMITTAL MEMORANDUM

TO: The Honorable Mayor and City Council

FROM: Lacey G. Simpson, Acting City Manager

DATE: December 10, 2021

RE: **COVID-19 Home Testing Kit Program**

Attached for City Council review is information provided by Acting Fire Chief Scott Brainard regarding a new COVID-19 Home Testing Kit Distribution Program administered through the Ketchikan Fire Department, South Tongass Fire Department and North Tongass Fire Department with the cooperation of Public Health. The kits are provided by the State of Alaska free of charge to the City of Ketchikan to distribute to residents. I would like to thank Acting Chief Brainard as well as the South and North Tongass Fire Departments and Public Health for their collaboration and willingness to administer what will be a meaningful program for the community.

Acting Chief Brainard will be attending the City Council meeting of December 16, 2021, should Councilmembers have questions and/or concerns regarding this program.

KETCHIKAN FIRE DEPARTMENT

Memorandum

TO: Lacey Simpson, Acting City Manager
FROM: Scott Brainard, Acting Fire Chief
DATE: December 10, 2021
SUBJECT: COVID-19 Home Testing Kits

Acting City Manager Simpson,

Ketchikan Fire Department with North and South Tongass Fire Departments are working on obtaining and providing free in home COVID-19 test kits for community households. The local Health Department is also assisting with support for the program. Home Test kits have been requested from the AK-HERO program and paid for by grants administered by the State of Alaska. These kits come with all the material needed to perform the test with easy to follow instructions.

The premise of the program is to make the kits available to the public via the identified fire stations as they are centrally located around our island. The effort is to provide the free resource for home testing in the privacy of your own home should you experience any symptoms of COVID-19 or if you are a close contact to someone with COVID-19, regardless of your vaccination status.

The attached “At-Home, Rapid COVID-19 Tests” explanation sheet provides details about where to obtain a test-kit, the testing process and what to do with your test results.

Scott Brainard

Acting Chief
City of Ketchikan

At-Home, Rapid COVID-19 Tests

The City and Borough Fire Departments of Ketchikan are distributing at-home, rapid antigen tests to community members.

Where can I pick up a free at-home test and how can I get?

As of December, 13th your fire department is distributing free at-home tests to the public from the following locations:

- City Fire Station 1 (70 Bawden St) and Station 2 (3352 Tongass Ave)
- South Tongass Volunteer Fire Department Station 4 (5690 Roosevelt Dr)
- North Tongass Volunteer Fire Department Station 8 (13110 North Tongass Hwy)

At this time, the public can pick up two tests per family while supplies lasts. The goal of the distribution is for families to have at-home tests on reserve for when one might be needed; for instance, if you're experiencing any symptoms of COVID-19 or if you have recently been in close contact with someone who tested positive. Do not go into one of these facilities to pick up at-home tests if you're feeling sick.

What is an at-home, rapid antigen test? And when should I use one?

An at-home COVID-19 test is a convenient option for anyone who needs to get tested for COVID-19. The test can be self-administered at home or anywhere, returns results in 15 minutes, and is a useful tool to help stop the spread of COVID-19.

If you're feeling sick, even with mild symptoms, or have been exposed to someone who tested positive for COVID-19, you can take an at-home test to find out if you have COVID-19. Even if you don't have symptoms and have not been exposed to an individual with COVID-19, using a self-test before gathering indoors with others can give you information about the risk of spreading the virus that causes COVID-19. This is especially important before gathering with [unvaccinated children](#), [older individuals](#), those who are [immunocompromised](#), or [individuals at risk of severe disease](#).

These at-home, rapid tests are antigen tests, which – while not as sensitive as PCR tests – are effective at detecting COVID-19 when it becomes transmissible.

Here's more information and guidance on self-testing from the [CDC](#), the [Alaska Department of Health & Social Services](#), and [Ketchikan Gateway Borough School District](#).

How do I use this test?

Currently, your fire department is distributing the QuickVue At-Home OTC COVID-19 Test. Printed instructions are included in every test box, or watch a short instructional video on how to use this particular test [here](#).

Most test kits come in a pack that contains two tests:

- If the first test is negative, you should retest 36–72 hours after your first test.
- If either one of the test results is positive, you are considered positive for SARS-CoV-2 infection.
 - If the first test is positive, you do not need to do the second test as a subsequent negative test does not overrule the first positive test.

Two negative test results should be interpreted with caution in symptomatic individuals. Consider getting tested at the [COVID-19 Drive-up testing facility](#), your healthcare provider, or [another provider](#), especially if you have [common COVID-19 symptoms](#), or if you have been exposed to someone who tested positive for COVID-19 within the past 14 days.

If I test Positive, what should I do?

If you test positive:

- Please isolate yourself from others for 10 days (regardless of vaccination status or lack of symptoms). This means you should stay in a specific room away from other people and pets. If possible, you should use a separate bathroom. Don't share personal household items, like cups, towels, and utensils. You should not go to work, school, church, or gatherings.
- Please notify your close contacts that they should quarantine. A close contact is anyone – either 48 hours before symptom onset or 48 hours before testing positive – you've been within six feet of for 15 or more cumulative minutes over a 24 hour period.
 - Fully vaccinated contacts:
 - Do not need to quarantine unless they become symptomatic
 - Should get a test 5-7 days after exposure regardless of lack of symptoms
 - Should wear a mask around others for 14 days or until their test is negative
 - Should test immediately if symptoms develop
 - Partially or unvaccinated contacts:
 - Need to quarantine for one of the below options:
 - 10 days from last exposure (no test required unless they have symptoms), or
 - Quarantine for 7 days, if they get a test on Day 5-7 and that test is negative

- Should test immediately if symptoms develop
- Share your positive test results with your healthcare provider or call the COVID hotline at 907-531-3329 to learn about possible treatment options or any other appropriate medical follow-up you might need.
- Monitor yourself for symptoms. If your symptoms become worrisome, contact your healthcare provider. If you experience any emergency symptoms such as difficulty breathing, chest pain, or confusion, call 911.
- While positive results are not counted in Alaska Department of Health & Social Services (DHSS) COVID-19 numbers [per guidance](#), your fire department asks residents to report positive at-home test results to learn about possible treatment options or any other appropriate medical follow-up that might be needed. Public Health can offer guidance on isolation and contact tracing but is not officially performing contact tracing on self-test results.

If you have questions about how to isolate or how to notify your contacts, call the COVID hotline at 907-531-3329.

Does my positive test result get counted in official COVID-19 numbers?

No. While positive results are not counted in Alaska Department of Health & Social Services (DHSS) COVID-19 numbers [per guidance](#), your fire department asks Ketchikan residents to report positive at-home test results to learn about possible treatment options or any other appropriate medical follow-up that might be needed.

Since these positive test results don't get counted in Alaska Department of Health & Social Services (DHSS) numbers, they do not get counted in City and Borough of Ketchikan COVID-19 either since Public Health gets its COVID data from DHSS.

If I test negative but am feeling sick, what should I do?

Most test kits come in a pack that contains two tests. If the first test is negative, you should use the second test 36 hours later. If both tests are negative but you have continuing or worsening symptoms that are consistent with [common COVID-19 symptoms](#), you should get a PCR test through the [COVID-19 Drive-up testing facility](#), your healthcare provider, or [another provider](#).

I've recently traveled. Can I use an at-home test to see if I caught COVID-19 while away or traveling?

In light of the new COVID-19 variant, Omicron, if you've recently traveled, please take the free COVID-19 PCR test that's offered at the Ketchikan International Airport upon arrival. Similarly, if you've recently traveled and test positive on an at-home antigen test, please take a follow-up PCR test at a local health provider or the [drive-up testing site](#). Positive PCR test results from the airport or other facilities are sent to the State Public Health Lab for potential sequencing.
